

Northstar Technologies — Information Security Policy

Fictional corporate policy | Version 1.0 | Effective 2026

Information Classification

Company information is classified as Public, Internal, Confidential, or Restricted. Employees must handle information according to its classification.

Passwords

Passwords must be unique and must not be reused across company and personal accounts. Passwords must not be shared or stored in plain-text documents.

Multi-Factor Authentication

MFA is required for corporate identity systems and applications designated by the Security team. Unexpected authentication prompts should be reported.

Phishing

Employees should verify unexpected requests for credentials, payments, sensitive documents, or urgent transfers. Suspicious messages must be reported.

Data Handling

Confidential and Restricted information must only be stored in approved company systems. Sensitive files must not be uploaded to personal cloud storage or unauthorized AI services.

Source Code and Credentials

Source code, API keys, access tokens, certificates, and database credentials must not be committed to public repositories.

Security Incidents

Suspected data loss, malware, phishing, credential compromise, unauthorized access, or lost company devices must be reported immediately.

AI Tools

Employees may use company-approved AI tools. Confidential, Restricted, customer, credential, or proprietary information must not be entered into an AI service unless explicitly approved.
